

# STF3-New: Foundation Spatiotemporal-Frequency Fusion for AI Video Detection

Modernized branches for Random/OOD experiments: DINOv2 spatial cues, D3/ReStraV temporal dynamics, WaveRep/FFT frequency traces

Key change from the old STF3-Lite figure: ResNet18 / pixel difference / SmallCNN / FFT-only modules are replaced by foundation embeddings, D3-ReStraV dynamics, WaveRep-style wavelet-spectral statistics, and branch-token fusion.
